SKILLS

Front End: HTML, CSS, Sass, Bootstrap, Tailwind CSS, JavaScript, TypeScript, React, SolidJS

Back End: PHP, Symfony, Node.js

Database: MySQL, MongoDB

Version Control: Git (Github, Gitlab)

Design Tool: Figma

Language: Hungarian (native), English (advanced)

EXPERIENCE

PHP Developer

Novin Informatika

January 2023 - November 2023, Remote

- Implemented authentication and CRUD functionality in Symfony, integrated with native JavaScript for user state tracking, and designed a responsive UI using Bootstrap.
- Designed the visuals for the website and crafted a flowchart with an example data structure in Figma to help visualize and guide the application development process.
- Refactored a problematic bug in the ORM code of a live website, correcting issues that resulted in inaccurate data under specific circumstances.
- Revised an outdated registration form, incorporating user-friendly features for different countries using JavaScript and jQuery. This update significantly improved the company's ability to manage users more efficiently.
- Built Symfony-based REST endpoints, delivering essential filtering and status application functionalities for the client, while also maintaining high code coverage and authoring unit tests for Doctrine entities, significantly bolstering the application's testing capabilities.
- Documented multiple REST API endpoints, facilitating streamlined communication and support for the front-end development team.

PERSONAL PROJECTS

Portfolio • [Demo](#) | [Github](#)

- Built a website for my portfolio with TypeScript and SolidJS, featuring a customized design with Tailwind CSS.

EasyGrocery • [Demo](#) | [Github](#)

- Developed a React-based shopping list app, with native CSS for a responsive design.
- Added important features like sorting items, saving preferences on local storage, and the ability to either add new stores or select from existing ones.

ShoeBox • [Demo](#) | [Github](#)

- Created a single-page application for a store, utilizing React as the frontend framework and Node.js with TypeScript as the backend.
- Utilized Figma and Tailwind CSS to design and implement an intuitive interface.
- Developed and implemented 8 API endpoints with CRUD operations, using MongoDB for efficient storage and retrieval of data tasks.
- Implemented client-side routes with React Router for smooth navigation within the website.

EDUCATION

Certificate in Software Information Technology

June 2023

Juhasz Gyula Faculty of Education, University of Szeged (SZTE JGYPK)
